

Manufacturing Process & Technology Optimization

Strengthen your competitive position to prosper in the global marketplace.

Affordable industrial engineering solutions that utilize the latest technology to enable businesses to be more productive, lower costs and maximize profitability.

- Improvements to elevate efficiency and effectiveness
- Facilitating data driven decision making
- Assistance in obtaining federal/state cost-share matching funds

Process Reengineering

Our clients need help to do what they do more efficiently. We assess the current situation, analyze and identify improvements, and implement desired changes. Our process reengineering consultants have extensive experience in reviewing, documenting, updating and implementing change to processes from inventory control to accounting, and even streamlining entire companies.

Process Transformation
Process Mapping & Analysis
Quality Management
Production Control Design
Process/Workspace Layout Redesign
Work Measurement/Sampling
Ergonomic Studies
Time & Motion Studies
Staffing, Scheduling & Routing Design

Business Intelligence and Data Solutions

Collecting data but unable to make decisions? We bring the data management and information control resources. Expertise in technologies and software allows Efficiency Engineers to provide successful strategies for positive change and data driven decision making.

Data Integrity Assessments
Database Design & Management
Data Mining
Independent Software Selection
Software Implementation
Software Integration
Simulation Modeling
Barcode & RFID Implementation
Shop Floor Control Systems

Efficiency Engineers utilizes industrial engineering expertise with the latest technology using proven methodologies and tools to enable businesses.

We produce end-to-end operational excellence.
